

Environmental Policy

Our principal activity is the blending and packaging of powder and liquid products for the construction market. We recognise that our key environmental impacts are the use of energy and the disposal of waste arising from our production process.

We are committed to achieving effective environmental controls and will address this by operating the management system described in ISO14001 and audited by BSI. This includes the following key items.

- Develop and maintain procedures to minimise the environmental impact of our operation including measures to reuse or recycle our current waste stream.
- Continually improve the operational efficiency of our factory paying particular attention to the consumption of resources such as packaging, fuel and electricity.

- Involve suppliers and employees in our environmental programme and to provide training where appropriate.
- Develop an effective plan to prevent pollution and to handle our response to emergency events.
- Comply with all legislative and regulatory requirements relating to our business and its environmental effects.
- To review this policy annually so that it remains in line with prevailing business and environmental needs.
